

DISTINCTIVE DESIGNS FOR EXTRA STYLE

Drained and Vented Glazing is **STANDARD**

Howarth Windows & Doors manufacture a range of special feature frames to add that extra dimension to your project.

A range of semi circular, circular, hexagonal and church type windows is available together with a wide variety of triangular windows which can be manufactured to your specification. (Some windows may be direct glazed only). Manufactured from Non-Laminated European Redwood, these windows incorporate all the design features of our Hi-Spec and Traditional / Reversible ranges, including 24mm sealed units, 18mm upstands and both plant-on and clip-on bar options, to ensure that they blend easily with the rest of the property.

Available finishes:

- Primed/stained and unglazed.
- Primed/stained and glazed.
- With twin coat paint/stain finish, and unglazed.
- With twin coat paint/stain finish and glazed.

The twin coat paint/stain finish incorporates a second paint or stain finish together with factory de-nibbing which provides the perfect base for on-site finishing. Howarth now uses stainless steel corrugated sash and frame clips in the assembly process, which eliminates all pinholes in the window frame and sash, and provides a smoother appearance on the finished products. Glazing beads are pinned to the sash using a 21 gauge galvanised micro brad, reducing the appearance of pinholes on the glazing bead.

***10 year guarantee on sealed units only applies to factory glazed frames.**

ANTI CAPILLARY GAP

Both vertical glazing beads and vertical external plant-on bars have an anti capillary gap created where they meet the drained and vented bottom bead.

This design minimises the chance of moisture uptake through the exposed endgrain, reducing the likelihood of degradation to both timber and paint finish.
