Sliding Sash All Bar with cambered head

TRADITIONAL STYLING, MODERN TECHNIQUES

Drained and Vented Glazing is **STANDARD**

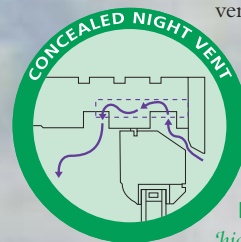

Howarth Windows & Doors has combined traditional styles with modern production techniques to produce a superior quality sliding sash window, which incorporates a tilt facility on both sashes for easy cleaning.

CONCEALED NIGHT VENT

In light of customer feedback, we have developed a unique concealed night vent for the sliding sash window range. By using specially designed cover strips and cleverly concealed ventilation, we can offer a sliding sash window with no protruding vent canopies, but at the same time still meets the Building

Regulations on ventilation.

Howarth sliding sash windows are available in the usual range of finishes* including Endurance.**

NOTE: Although the sliding sash is a 'high performance' window, in some exposed locations such as coastal, hillside and south westerly areas a small amount of water may be ingressed during severe weather conditions.

BRITISH WOODWORKING FEDERATION TIMBER WINDOW ACCREDITATION SCHEME

Howarth Windows & Doors liaised closely with The British Woodworking Federation when designing the new window frame to ensure that the product meets the high standards customers expect from a world class company. As with all window and door frames, the sliding sash has been accredited to the BWF's Timber Window Accreditation Scheme. This ensures that the product will meet the same high standards as the rest of Howarth's ranges.

ANTI CAPILLARY GAP

Both vertical glazing beads and vertical external plant-on bars have an anti capillary gap created where they meet the drained and vented bottom bead.

This design minimises the chance of moisture uptake through the exposed endgrain, reducing the likelihood of degradation to both timber and paint finish.

* **NOTE:** All Howarth's paint/stain finishes are silk and not high gloss.
