

The traditional range can be supplied to Secured by Design standard.

Components are made from clear faced laminated timber for enhanced strength and stability.

## SECURE AND TRADITIONALLY STYLED FOR CONSERVATION AREAS

Drained and Vented Glazing is **STANDARD**

Designed to meet the growing need for a traditionally styled flush fit casement window, particularly in conservation and inner city re-development areas, the new Howarth Traditional range provides the solution and then goes even further.

In order to improve the overall aesthetic quality, all the main frame and sash components will be made from clear faced laminated timber from sustainable sources for enhanced strength and stability as well as providing an environmentally friendly solution. Plant-on components, such as cills, bay coupling posts and head drips will be manufactured using Non-Laminated European Redwood.

The new Traditional Window Range offers the same performance standards as the Hi-Spec range and is available in the following finishes:

- Base coated (prime or stain) + glazed
- Twin Coat (prime or stain) + glazed
- Endurance (Fully finished) + glazed

\* The Endurance finish carries extensive guarantees on both frame and sealed units

The same range of bar configurations will also be available using plant-on bars (as standard) or clip-on bars (as an option) therefore offering the same range of styles as the Hi-Spec Range.

*Plant-on bars will be made using Non-Laminated European Redwood. Clip-on bars will be made using clear Douglas Fir.*

### SECURED BY DESIGN

The new Traditional range can also be supplied to Secured by Design standard, dependant on size and configuration. Contact our Sales Office for further details 01469 535302.

As with all Howarth's timber windows & doors the Traditional range is manufactured under the strict guidelines set out by the British Woodworking Federation's Timber Window Accreditation Scheme, which is now inspected under the BSI Kitemark scheme, ensuring that you and your clients

receive the best quality products and the highest levels of performance.
